ABOUT US

OUR VISION

Our vision is to offer an affordable range of products and services, thereby providing each individual client with a cost-effective package capable of meeting their specific needs.

OUR MISSION

Our mission is to establish quality-driven business practices, thereby cementing long term professional relationships with our clients. How do we do this? By upholding and delivering on our brand's core values and principals, as well as the unique service solutions our clients have come to expect.

OUR VALUES

Our values and principals are not only to maintain quality-driven business practices, along with nurturing client-based relationships, but also to reach out to the local communities in and around our base of operations, thereby also meeting the needs of those less fortunate, regardless of race, gender, or belief.

OUR HISTORY

Drawing on his many years of manufacturing experience in the feed and seed processing industry, Mr. Vincent Charles Coote founded J Planet Consulting and Engineering in 2017 to meet the ever-growing and demanding needs of individual clients in the feed and seed processing plant industry.

Established as a passionate and reliable South African based company, J Planet Consulting and Engineering is committed to setting the industry benchmark, with the aim of becoming leaders in the supply of specialised machinery, as well as custom service packages, providing nothing but the best in a cost-effective way without compromising on quality.

OUR SERVICES

At J Planet Consulting, we offer a wide range of services that cater to the agricultural, commercial, and industrial sectors, allowing our team of experts and professionals to fabricate quality products from start to finish with minimal outside influence. To ensure this, we adhere to the manufacturing process as following:

DESIGN

This stage encompasses the entire planning process, which includes measuring up on-site, selecting the appropriate materials, drawing up blueprints, as well as final 3D renders.

FABRICATION

The next stage is the actual manufacturing process that ranges from custom laser cutting, bending, welding, to specialised CNC turning.

ASSEMBLY

After all the relevant parts are constructed, they are then assembled to make up the final product.

QUALITY CONTROL

Once the final product is complete, the strictest quality control measures are put in place to ensure that our clients receive their products in good working order.

FINISHING

Satisfied that the final product works as promised, it is sent for finishing, either in the form of spray painting, or powder coating.

DELIVERY

When ready, the final product is packaged and sent out for delivery.

ON-SITE INSTALLATION

Should clients require it, the final product is delivered to and installed on-site by one of our away teams.

TURN-KEY PROJECTS

As a turn-key service provider, we are leaders in the field of customised processing plant solutions, minimizing the outsourcing of critical services, ensuring that each project is run to the specifications of each individual client from start to finish.

ARE UNBEATABLE

J Planet Consulting also offers these solutions, either as part of a package, or as stand-alone services.

ELECTRICAL INSTALLATIONS

Our in-house electrical experts are skilled in the designing, installation, and maintenance of most electrical systems for almost any size or type of project.

PLANT DESIGN

Processing plants handle many separate functions while performing a streamlined process. Our qualified designers ensure that every inch of space is planned to maximise production, and minimize downtime.

PLANT RELOCATION

Processing plants are always built with location in mind, yet there are times when expansion demands relocation. Our trusted experts are able to handle the entire relocation process. Your prized equipment is in safe hands at all times.

PLANT MAINTENANCE

In addition to our other processing plant services, we also offer extensive services relevant to the upgrading and ongoing maintenance of existing processing plants.

ON-SITE INSTALLATIONS

Customised large scale machinery is designed and built to meet the needs of you, the business owner. When machines like these are commissioned, you can rest easy, knowing that our team of experienced experts will take care of every stage of the installation process.

PROJECT MANAGEMENT

Large scale processing plants have all kinds of artisans working on the same project, increasing the risk of miscommunication, as well as the chances of unforeseen delays. Our industry experts are qualified to undertake the overall management of your specific project, ensuring that everything runs as smoothly as possible.

MAINTENANCE + REFURBISHMENT

Even not so new high end custom made machinery needs care, and from time to time, that extra bit of TLC. As established market leaders, we are able to offer the best solutions to repairing or refurbishing your beloved equipment in the most cost effective way possible.

ENGINEERING + MANUFACTURING

Our services also include, but are not restricted to the manufacture of individual components such as:

- Diverters -- Spouting --
- Flanges -- Reinforcing Rings --
- Fans -- Fan Guards --
- Airlocks -- Aspirators --
- Ducting -- Conveyor Systems --
- Chain Drive Systems -- Bins --
- Hoppers -- Tipplers --

And so much more...

PETKUS SA*

WE ARE PETKUS SOUTH AFRICA

We are the sole distributor of PETKUS seed processing equipment in South Africa and neighboring countries.

PETKUS is a leading provider of high quality seed and grain technology solutions. Their machinery is designed to help farmers, processors, and other agricultural businesses increase their efficiency and productivity. PETKUS offers a wide range of products, from seed cleaning machines to grain storage systems. All of their equipment is built with the latest technology and designed to provide reliable performance in any environment.

Their seed cleaning machines are able to remove impurities from various types of seeds, including wheat, barley, oats, rye, soybeans, sunflowers, and more. These machines are also capable of separating different varieties of seeds based on size and shape. This helps farmers ensure that they are planting the best quality seeds for optimal yields.

In addition to seed cleaning machines, PETKUS also offers grain storage systems that can store up to 2 million bushels of grain at once. These systems feature advanced temperature control capabilities that keep stored grains safe from spoilage or contamination. They also come with automated monitoring systems that alert users when temperatures reach dangerous levels or if there is an issue with the system itself.

PETKUS's commitment to quality has made them a leader in the agricultural industry for over 170 years. Their innovative products have helped farmers around the world increase their yields while reducing their costs and improving their sustainability practices. With PETKUS machinery, you can be sure that your crops will be taken care of throughout the entire growing season.
